

1 **ABSTRACT**

2 A gaming system includes a game console that executes an application that
3 creates and plays soundtracks through the gaming system. The application allows
4 a user to create soundtracks by copying audio tracks from one or more audio
5 sources. A user-created soundtrack can be associated with a particular game such
6 that the user-created soundtrack is played during execution of the game instead of
7 the game's default soundtrack.
